

BRIEFS FILED YESTERDAY IN NEW MEXICO SMART METER CASE

Thanks to hundreds of written comments that continue to come in from far and wide, we have a chance to keep smart meters permanently out of New Mexico; to preserve our state as a refuge and an example to the world; and to burst the seeds of life out of their envelope to blow all over the Earth and take root.

It has been 18 months since Public Service Company of New Mexico (PNM) applied to change all of its electric meters to smart meters as part of “grid modernization”. Two sets of public hearings have been held -- in March 2023, and again in April 2024. PNM filed a cost-benefit analysis which did not include any costs to human health or the environment. Legal briefs on that analysis were filed with the New Mexico Public Regulation Commission yesterday, June 11, 2024.

The [brief filed yesterday by New Mexicans for Utility Safety](#) contains excerpts of your written comments from all over the world painting vivid descriptions of what smart meters have done to you, your loved ones, and the animals and plants around you -- including descriptions of severe injuries, deaths, and homelessness caused by the radiation from these meters.

Please read this brief, share it widely, and send it to your local news media, to environmental organizations, and to your governments.
